Street Smart Rental Acquires SiteKick, Expanding Jobsite Security and Intelligence Capabilities Nationwide

Acquisition brings SiteKick's AI-powered site security and monitoring technology into Street Smart Rental's Vision Suite™ platform under Vision.Security and Vision.Sense

MINNEAPOLIS, Minn. - Oct. 28, 2026 — Street Smart Rental, a nationwide provider of traffic safety and jobsite security technology, today announced it has acquired SiteKick, a construction site security and jobsite monitoring company. The acquisition expands Street Smart Rental's technology and service capabilities for general contractors, security integrators, and property owners nationwide.

SiteKick has built a strong reputation delivering construction site security, AI-powered video monitoring, and real-time jobsite visibility to general contractors across the country. Combining SiteKick's technology and customer relationships with Street Smart Rental's nationwide equipment fleet, service infrastructure, and expertise in traffic safety and security creates a more complete, turnkey offering for jobsites of every size.

As part of the integration, SiteKick's technology will become part of Street Smart Rental, with its capabilities joining Vision.Security and Vision.Sense within the company's Vision Suite™ platform. Customers of both companies will continue to be served by their existing points of contact as the integration moves forward.

> *"SiteKick was the first construction site camera monitoring platform integrated into Procore, and that integration reflects exactly the kind of value we want to keep building for contractors — one connected view of their jobsite, their schedule, and their security, without adding new tools to manage," said Jeremy Peterson, CEO of Street Smart Rental. "As we bring SiteKick's technology into Street Smart Rental and our Vision Suite™ platform, deepening that Procore relationship and extending it to more of our customers is a priority for us going forward."*

The acquisition is part of Street Smart Rental's continued investment in their growing site security, traffic control, utility, and event solutions portfolio - connecting data from a nationwide equipment fleet into a single, persistent system. Street Smart Rental has been serving customers nationwide for 27 years and maintains an industry-leading customer satisfaction score of 86% NPS.
